

# Policy Statement Settels Savenije Group of Companies

## Our identity

Settels Savenije was founded in 1987. We are a group of companies where high level technology is combined with a passion for people. Our customers are original equipment manufacturers who want to have a new machine or module developed. Our know-how and knowledge helps our customers in a strategic manner, and supplies them with a total solution.

## Our succes

Our success is determined by the following facts:

1. We combine fundamental development knowledge, high-quality manufacturing knowledge, and manufacturing technology with controlled and predictable engineering, manufacturing, building and testing of tools, systems and parts.
2. High quality is found in our people, performance and processes.
3. Quality and on-time delivery to our customers come first.
4. We ensure an inspiring, innovative, transparent and honest working environment for all our employees. The development of our people is of highest priority.

## Quality and environment within Settels Savenije

In order to optimize the processes and the quality of the organization's output, Settels Savenije's business operations must be properly safeguarded and optimized. To achieve this, Settels Savenije has set up and implemented a management system in accordance with the requirements of ISO 9001 and ISO 14001. Satisfying the expectations of customers and relevant stakeholders and continuously improving the internal organization, our processes, and our environmental performance is key in this management system. At Settels Savenije, we commit ourselves to fulfilling our regulatory demands, protecting the environment and preventing environmental pollution.

A combination of risk analyses, internal project evaluations, customer satisfaction analyses, laws and regulations compliance checks and internal audits helps to identify possible improvements within the processes of our organization. By analyzing information and implementing improvements based on this information, a learning organization arises where continuous improvement is key.

## Scope of our management system

The scope of the management system is determined as:

*'Research, development, building and assembly of high-tech systems, modules, and parts.'*
